

PAYZONE™ Wiper Plug

INTRODUCTION

Reactive Downhole Tool's Payzone Wiper Plug (WP)* is an effective solution for achieving a maximum casing integrity test, while initiating communication with the reservoir.

The Payzone WP system has an integral Land & Latch-in Sub which is situated above any standard float or float shoe equipment.

With Payzone WP landed, a bump test is performed while maintaining casing integrity. Subsequently a full system pressure test is applied and access to formation occurs upon bleed down.

Availability

- Currently available for 5-1/2" casing
- Successfully tested up to 10,000 psi full differential

CEMENTING OPERATIONS

- Land out Plug over displacing the cement to leave a wet shoe
- "Bump" test performed as normal
- Well integrity established

FRACTURING OPERATIONS

- Perform a full system pressure test
- Test can be held for as long as required
- Access to formation occurs upon bleed down
- Pump down guns eliminating coil tubing run
